## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The Chinese language Official Action in the information disclosure statement filed October 29, 2001 has been lined through because it is not in the English language and there is no concise explanation of its relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information. It has been placed in the application file, but the information referred to therein has not been considered.

### ***Specification***

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Araki et al. (WO97/48774).

Art Unit: 1773

Araki et al. is directed to a coating composition, a method of coating, and a coated article. The coating composition comprises particles of a fluorine containing polymer prepared by copolymerizing a fluorine containing ethylenic monomer having a functional group such as hydroxyl, carboxyl or a carboxylic salt and a solvent. In a preferred embodiment, the fluorine containing polymer comprises a copolymer of 0.05-50 mole% of the functional monomer and 50-99.95 mole% of tetrafluoroethylene. In the embodiment of Preparation Example 3, the polymer is an aqueous dispersion and has a melting temperature of 314 °C. The coating composition comprises 30-99.9 wt% of solvent and at least 0.1 wt% to no more than 70 wt% of polymer. To maintain dispersion stability, storage stability, and transparency of the coated film, the particle size of the polymer should be about 0.01  $\mu\text{m}$  to not more than 0.2  $\mu\text{m}$  (i.e. 10-200 nm). For coatings wherein the polymer has a high melt viscosity and is not melted, such as PTFE, the coating is baked at a temperature higher than the melting point of the polymer. Water repellant coatings applied to glass substrates preferably have a thickness of 0.01 to 2  $\mu\text{m}$ .

### ***Conclusion***

3. The U.S. Patent 6,207,236 is made of record because it is in the same family as WO97/48774.
4. The rejection under 35 U.S.C 102(b) put forth in paragraph 2 above will be withdrawn upon filing of a certified English translation of the original patent to which priority is claimed. However, the rejection put forth in paragraph 2 will then be reapplied under 35 U.S.C. 102(a).
